# Message from Director

Vision is a gift of God to all of us. To lead a normal life, good eye sight is essential to each and every human being. Now-a-days advanced eye care hospitals not only provide good treatment, but also offer awareness on preventable eye diseases. We at Kalinga Eye Hospital pledge to meet the patients' requirements by offering expert ophthalmic care with compassion through a committed professional team; patient safety and well-being shall always be our top priority. We are striving for continuous quality improvement and comply with international standards to implement quality systems. We commit to provide equitable and efficient eye care to all sections of society, thus restoring sights over 10,000 people a year at no cost through surgical interventions and to reach to more people who are un-served with eye care. To continue to help the state of Odisha reduce avoidable blindness a lot of initiatives are yet to be taken, however to enact them your support is needed. So please log onto our website and become part of the team by donating your money or time to Kalinga Eye Hospital.

**Sarangadhar Samal,**

Director

Kalinga Eye Hospital, Dhenkanal

# About Kalinga Eye Hospital

A ray of hope for many : It was in 1982, the NGO called NYSASDRI, Dhenkanal dreamt of an eye care institute to serve the people of central Odisha; NYSASDRI Eye Hospital was born with a mission to be a centre of excellence in Eye care services, basic and clinical research into eye diseases and vision-threatening conditions, training and rehabilitation for those with incurable visual disability, with a focus on extending equitable and efficient Eye care to underserved populations in the developing world. The hospital has started serving the community in eye care from one of the remote village namely Santhasara of Gondia, Dhenkanal. Later in the year 2002, the hospital was shifted to the Dhenkanal town and was renamed to Kalinga Eye Hospital. Now Kalinga Eye Hospital is a secondary level eye hospital in Dhenkanal with two centers. The first center is located at the Dakhinakali Road of Dhenkanal town, the second at Govindpur, Dhenkanal. This is a state of the art modern eye hospital fully equipped with latest imported equipment to ensure total eye care services can be rendered under one roof. Apart from serving the able community, It works in spirit of collaboration with local communities, 90 % of which is deprived of even basic eye care services. It gives free of cost services to patients are in need. The treatment includes free of cost examination, treatment and surgery, glasses, medicines, transport, food, toys and ancillary services. As a result this institution has able to make eye care services accessible, available and affordable for many, who has never thought of accessing eye care services at their door step. Now this Hospital has become a model in community eye care for many.

# Orientation programme for eye surgeons of Odisha

A Workshop named “Orientation Programme of Eye Surgeons on Managing Quality Standards in Cataract Surgery and its Post Operative Procedures”, was held on 29<sup>th</sup> December 2016 by Kalinga Eye Hospital, in collaboration with the Directorate of Health Services, Govt of Odisha, at Hotel Sandy’s Tower, Bhubaneswar. This Workshop was coordinated by Sightsavers and Kalinga Eye Hospital, Dhenkanal. Seventy-two delegates from 13 districts of our state Odisha participated in the programme. The Collector, Khordha Shri Niranjan Das, IAS graced the occasion as the Chief Guest. There were many distinguished guests, including the senior officers from Director Health Services, Odisha Dr.Kailash Ch. Dash, Director Health Services, Odisha, Dr. P.K.B Pattnaik, Joint Director Health Services, Non Communicable Diseases, CDMOs, DPMs, ADMO (PH) from different districts, eye specialists of Government Hospitals, Medical Colleges and NGO Eye Hospitals, and team from Sightsavers. The objective of this workshop was to discuss the present practices and improve the quality standards in ophthalmic services amongst the Government and Non Government ophthalmic institutions. Dr.Rohan Chariwala of Divyajyoti Trust, Gujarat and Dr. Amish I Patel of Eye Care & Laser Centre, Ahemdabad, Gujrat were the resource person for the workshop. Infection control protocols, quality assurance in cataract surgical services, cleaning of equipment and environment, cataract Surgery- pre operative patient preparation & post operative care, clinical protocols outbreak policy and documenting OT disinfection and sterilization protocols-medico legal importance were some of the topics covered by the resource persons.

# 118 Camp surgeries accomplished in 1 Day

Kalinga Eye Hospital has been conducting comprehensive eye screening camps since 2002 in association with social enterprises, healthcare organisations, other non-profits and individuals. On 17<sup>th</sup> February 2016, 391 persons were screened and 118 cases were brought for surgery; similarly on 25<sup>th</sup> December 2016, 347 persons were screened and 102 patients were brought for surgeries. Kalinga Eye Hospital has achieved the rare feat of performing over 100 surgeries in just a single day two times due to the wholehearted dedication of the team

# Low vision services and vision rehabilitation centre

At Kalinga Eye Hospital, Dhenkanal the Paediatric vision assessment was strengthened with the guidance of Dr. Asim Kumar Sil. As a part of the Sightsavers project, the Vision enhancement clinic and Low Vision set up was established at Kalinga Eye Hospital in November 2016. The centre has also introduced different types of telescopes for patients to improve their distance vision as well near. Aids will be provided free of cost to the deserving under the project.

# Advocacy workshop on system strengthening 19th November 2016

An advocacy workshop on system strengthening was conducted on 19th November 2016 at Kalinga Eye Hospital, Dhenkanal. Different stakeholders from Dhenkanal, Angul, Deogarh, Cuttack and Bhubaneswar attended the advocacy workshop. The objective of the workshop was to ensure that our community will always have access to high quality eye care services, so that avoidable blindness can be reduced, and for this to happen both the Government as well as NGO institutions should come together to strengthen the system. Persons from the Education department, Health Department, National Health Mission and other Government departments participated in the workshop. A total of 85 participants attended the workshop. The Programme Officer, Sightsavers and the well known paediatric ophthalmologist of India Dr Mihir Kothari from Mumbai were the resource persons for the workshop.

## Creating eye care awareness in the community

Eye Care rallies and seminars were organized on various occasions to enhance public awareness of eye diseases and improve the Eye-Health seeking behaviour of the community.

# Eye glass distribution in Feb 2016

Kalinga Eye Hospital ensures that those with curable eye ailments are brought to medical care in a timely manner. With support from the SEVA-TOMS, Kalinga Eye Hospital has successfully carried out many camps for refractive check-up. In the calendar year 2016 Kalinga Eye Hospital has reached out to a total of 6,705 general beneficiaries. These beneficiaries are screened for refractive errors and other treatable eye diseases and accordingly provided requisite refractive error corrected spectacles free of cost. A special camp was also conducted for two days, from 22-23, February 2016, for the Alekh Mahima devotees at the Mahima Gadhi which is dedicated to the supreme lord. Devotees were screened for refractive error and 336 were provided with refractive corrected spectacles free of cost. In the calendar year 2016, 1000 people were provided with refractive corrected glasses free of cost under the initiative.

# Towards ensuring total coverage in eye care

From 2017 onwards, Kalinga Eye Hospital is planning to continue serving the community through primary eye care centres (Vision Centre). These are small, permanent facilities set up to extend eye care services to remote and rural communities. Permanent eye care facilities in rural areas encourages people to seek earlier treatment for vision problems, allowing them to reintegrate back into the workforce, instead of becoming increasingly unproductive due to decreasing vision. The new patterns of proactively seeking eye care before it's too late makes the role of vision centres even more crucial in an eye care institution's outreach initiative. Kalinga Eye Hospital and Sightsavers joined hands to provide comprehensive eye care through the Vision Centres. In the initial phase one of the centre is been placed at Khajuriakata of Hindol block and another one at Govindpur village of Sadar block of Dhenkanal district. Apart from regular eye screening, these centres are conducting school eye screening programmes and different types of awareness programme in the locality.

# Education and training

Every year, Kalinga Eye Hospital recruits girls who have completed their school education and train them on the job as MLOPs (Mid Level Ophthalmic Personnel), for various jobs such as nursing, housekeeping, administration and others. These MLOPs are undisputedly the heroes behind Kalinga Eye Hospital's success, and have been the backbone of the organization from the beginning.

With the steady growth in volume of work and ever expanding facilities at Kalinga Eye Hospital, there is a constant need for trained personnel at all levels. The same scenario provides excellent opportunities for learning, making Kalinga Eye Hospital an ideal centre for education and training in central Odisha for the students who have lost their hopes. This year Kalinga Eye Hospital has started two formalized training courses and enrolled 25 students, and from next year Kalinga Eye Hospital is planning to add another two streams and enrol more students who can build careers in eye care. After completion of the courses, the students have every liberty to work in any institutions of the nation. The campus selection facilities will also be there for the students.

# Recognitions and achievements

Apart from celebrating efforts taken, awards motivate people with a drive to improve performance. This year, contributions of Kalinga Eye Hospital were recognized by various forums, both state level, national level and at international level. Senior members were specially invited to deliver memorial lectures as well.

# Creating master trainers

The Train-the-Trainers programme on identification of common eye problems amongst the adult and children age group is a part of a comprehensive approach to reduce the avoidable blindness in Dhenkanal. The main objective of the training programme is to reduce the burden on the technical person whose quantity is less and time is more important, so Kalinga Eye Hospital has created a group of Master Trainers, who will cascade their skills to the school teachers, ASHA Workers, Community Health Workers, Village Volunteers and similar kinds of people. As a result community participation will also be increase in the eye care programme which is one of the components of sustainability at the same time early identification and referral can be

ensured from the community at a regular basis. BRTs, team from Rashtriya Baal Swasthya Karyakram (RBSK)

The long term expected result of the training programme is to enhance good service practices in the community and also assist the community in eye care without causing an unnecessary burden to the limited technical persons.

# Towards ensuring total coverage in eye care

The outreach wing of Kalinga Eye Hospital, that started as a simple cataract screening camp, has in the past 3 years have evolved into a comprehensive movement-that involves the communities it serves. Many kind hearted institutions, industries and individuals help Kalinga Eye Hospital in our mission of restoring sight to the neediest from the most remote communities. This year only, Kaliga Eye Hospital had 269 camps through which 33,997 patients were screened and 10,173 underwent surgery.

# Training of school teachers

Kalinga Eye Hospital has been imparting training to specially identified school teachers to do preliminary eye examinations in school children. The children who are diagnosed with vision problems are further screened by the Hospital team. Recently, this training has been provided to all class teachers to perform preliminary vision tests. This has proven to be more effective, in terms of accuracy and efficiency of screening.

# Volunteering at Kalinga Eye Hospital

**Molly Kathrine Klare**

**Emma Davis**

Volunteers from diverse backgrounds, professional photographers, medical students, undergraduates, and professionals from all over the world come visit Kalinga Eye Hospital to extend their support in the field of community ophthalmology. This opportunity is a unique chance for volunteers to explore Odisha while learning about the barriers to healthcare in the region, all while lodging at Kalinga Eye Hospital along with the paramedic staff members, which allows them to become fully immersed in the life of the hospital. This year, 2 volunteers namely Molly Kathrine Klare of United States of America and Emma Jane Davis of Australia have joined hand with Kalinga Eye Hospital on a variety of activities.

# School Eye Health model

Often it is observed that in Government schools eye screening of children and dispensing of spectacles is considered as school eye health. As a result screening and dispensing of spectacles is the usual activity thereby not achieving the desired intervention on school eye health which is a more quality oriented, comprehensive and sustainable approach to addressing eye health issues among children in schools. Given the current level of work by the Education department and NPCB, the school screening programme remains a standalone activity that happens every year with an aim of spending allocations made towards this end and not with an aim of addressing the eye health needs of children in schools.

School Health, including eye and visual health, is inextricably linked to educational achievement, quality of life, social interactions and economic productivity. If eye health problems of children in the school-going age group are addressed early, they can lead better lives with improved learning outcomes. This is best done through adopting a primary eye health approach which includes eye health education, vision screening, correcting refractive error and referring low vision, and goes beyond that to improved eye health practices by all children in a supportive environment. An effective school health programme can be one of the most cost effective investments a nation can make. Due to the above reasons, School Eye Health Programme was introduced and in the first year the model can be tested in Dhenkanal district and later it can be scaled up to other districts.

# System strengthening approach to create a model Rural Eye Health programme district

As per the new concept of community ophthalmology, the eye health program will be of “High quality comprehensive eye health services with effective interlink between all the levels of delivery”. So Kalinga Eye Hospital is aiming for the provision of high quality comprehensive eye health services. This requires holistic interventions at all the levels of the health delivery systems. The primary level platform can be used for on ground demand generating activities through ASHA and other community based service deliverers, apart from first level of screening activities. At the secondary level, the program is focusing on lacunae proof supply of high quality service in the form of cataract surgeries and secondary level screening facilities. Here the primary focus is to plug supply gaps, as it is at this level that we have to deal with the biggest cause of blindness i.e. cataract (62.6%). To enhance demand generating activities, strategies are developed to work with the community level workers like the ASHA and AWW members in spreading eye health related awareness and subsequent demand generation, ensuring that people reach primary and secondary health centres. To fill the supply gap, Kalinga Eye Hospital in association with INGOs will pitch in whatever equipment and materials are required (as per DEHAT findings) and advocate for those which the Government can purchase on its own. A lot planning will be done towards streamlining the supply chain for an effective service delivery. Under this approach we would also be training and building the capacity of the existing human resources to inculcate the tenets of data driven management in them. The program will also have quality checks and balances through quality record keeping. As stated above Kalinga Eye Hospital will be taking a holistic approach to provide comprehensive and integrated eye health services.

# Rally to increase awareness about glaucoma

Glaucoma is the second most common cause of blindness after cataract, it is irreversible, but preventable. Since there are no obvious symptoms reported in the early stages, glaucoma is often referred to as the 'silent thief of sight'. To raise awareness in society, a glaucoma awareness rally was organised on 12th March 2016, by Kalinga Eye Hospital and the Rotary Club of Dhenkanal. MLOPs, Nurses have also joined the rally. People at risk are those with advancing age of 40 and above, elderly patients over 70 years with low blood pressure, diabetes, family history of glaucoma, shortsightedness, migraine, diabetes, thyroid disease, chronic long term use of steroid for asthma, arthritis, skin disorders, history of blunt eye injury in the past and post cataract surgery. Early diagnosis of glaucoma in every patient coming for a routine eye check up in the age group 35 and above involves recording of intraocular pressure, slit lamp examination of the internal structures of the eye and optic disc evaluation. Suspicious glaucomatous changes should alert the ophthalmologist to perform further important diagnostic test like visual field testing. More than 75 persons from Kalinga Eye Hospital and the local community participated in the rally

# Confirmative eye screening camps

Considering the fact that 30% of India's blind lose their sight before the age of 20 years and many of them are under five when they become blind, the importance of early detection and treatment of ocular diseases and visual impairment in young children is obvious. Vision problems affect one in 20 preschoolers and one in four school age children. During a child's first 12 years, 80% of all learning comes through vision, and yet most children have not had a comprehensive eye examination after the birth or prior to starting school. Majority of students identified as problem learners have undetected vision problems.

Prevalence of refractive error (visual acuity  $<6/9$ ) among children could be as high as 5% according to an estimation made by the Government of India. Refractive error in children, if untreated, almost always leads to poor academic performance and results in students dropping out of their education system. Refractive error in children can easily be corrected by providing a pair of spectacles. As 75% of the population lives in the rural areas, the same proportion of children who are blind or have significant refractive errors would be living in the rural areas where no pediatric eye care or refraction services are available. So to detect these children early, Kalinga Eye Hospital has developed the skills of the school teachers in identifying children with eye problems; even the teachers are provided with a scientifically designed eye screening KIT. After the training, the teachers have identified 3133 children with ophthalmic ailments and out of them

2036 have attended the confirmative eye screening camps. In these confirmative eye screening camps ophthalmic technical persons have screened these identified children and provided treatment accordingly. So far 399 children are provided with refractive corrected glasses too. This time, trendy, light weight frames with fiber glasses spectacles were provided to the children.

# Reducing Childhood Blindness

Globally, blindness in children is responsible for only 3% of all blindness. However, childhood blindness is important because of the number of years that a child has to live with visual disability compared to an adult. Therefore though adult onset blindness is much more common, life expectancies across the developing countries being in the range of 50-70 years, the number of “life years with disabilities” is far higher for children. An Adult going blind at the age of 50 years can look forward to another 10-20 years of productive years of life if left untreated, while a child today will still be alive with disability in 2050AD even if the current rate of life expectancy continues. The concept of “Blind years saved” is very useful in arguing for allocation of resources for childhood blindness because restoring the sight of one child with Pediatric cataract is equivalent to restoring sight of 10 elderly blind cataract individuals. Opportunities for education, employment and earning potentials are severely affected; also early onset blindness adversely affects the psychomotor, social and emotional development of children. So reducing childhood blindness is one of the major objectives of the institution and in 2016 alone Kalinga Eye Hospital has conducted 127 no of surgeries on children free of cost.

# Hospital Based Programme: Dr. Kothari Visit (November 17-19, 2016)

A two days Hospital Based Programme (HBP) on paediatric strabismus was organized at Kalinga Eye Hospital by the well-known ophthalmologists of India Dr.Mihir Kothari of Mumbai. The HBP was conducted from 17th to 19th November 2016, where Dr. Kothari has discussed with the Paediatric Ophthalmologist of Kalinga Eye Hospital, Dr Chandra Sekhar Sahoo, and the other ophthalmologist, and helped them learn the skills and address concerns over strabismus surgeries. Apart from strabismus surgeries, Dr Kothari has transferred his skills on other diseases including Ptosis and lid treatments. During the programme Dr. Kothari also conducted clinical classes for the clinical team of Kalinga Eye Hospital. As many as 55 free paediatric eye surgery operations were conducted during the camp. 117 children were screened and detected to be in need of specialized eye treatment, the children were aged between 13 months and 15 years. They belong to poor and poverty stricken families, so Kalinga Eye Hospital has conducted the surgeries free of cost for the patients.

# Helping restoring sight

There are a few non-profit global health delivery organizations who have joined hand with Kalinga Eye Hospital in restoring sight to people in need, such as, Sightsavers, Wonderwork, Unite for Sight, Vision Foundation of India, IAFF, DCI and DIK, Germany. These groups partner with KEH to provide comprehensive ophthalmic care and education about preventative measures through conducting outreach eye treatment camps. Many patients in Odisha cannot access eye care because of a variety of reasons, such as lack awareness or transportation, loss of wages, or lack of

need. To work around these barriers to care, outreach camps were designed to help patients restore their sight. Outreach camps are conducted in a radius of about seven hours from the clinic in the local villages to minimize patient travelling. Patients from these camps who need surgery are transported back to the hospital for treatment and once surgery is done, patients are counselled about postoperative care and are dropped back at their respective villages and regularly provided with follow up care by our outreach teams. This year, 10,123 patients were provided with free sight-restoring cataract surgery, supported by these International NGOs

# Programme Study at Kalinga Eye Hospital, Dhenkanal

The Programme team from Sightsavers, India, consisting of the Chief Executive Officer, Area Director, Programme Director and the Programme Officer have visited Kalinga Eye Hospital in December 2016, during their visit

they have visited one of the reach our eye screening camp, which was been conducted at CHC, Odapda (Government set up), under the GO-NGO system strengthening approach model, there the team has also interacted with the ASHA worker, who were referring patients with eye problems to the eye camp. The team also interacted with some of the patients and some operated patients too. On the same day the team visited one of the School Eye Screening camp which was been conducted at Siminai Primary School of Odapada block of Dhenkanal under the National School Eye Health Programme; here the team interacted with school teachers, children and with the clinical team who were conducting the screening programme. The team has appreciated the efforts which are being taken by Kalinga Eye Hospital, Dhenkanal.

# QAS study at Kalinga Eye Hospital

A quality assessment study was conducted at Kalinga Eye Hospital from 1st-2nd December 2016 by Dr. Sandeep Buttan, PDA Eye Health & Health System Strengthening (Asia) of Sightsavers. In these two days Dr. Buttan visited the entire Hospital, reviewed the existing protocols, documents and system in place to cater patient centric services with the best quality. On the second day Dr. Buttan sit with the team and shared the scopes for improvements, so that even better quality

ophthalmic services can be availed to the patients, and with these improvements, it will be beneficial to both, the patients and the institute. After completion of the study, the management of Kalinga Eye Hospital sit with the entire team and discussed the plan of action to incorporate the suggestions at the earliest time - it is expected that all can be incorporated before the end of 2017.

# Involving ASHA in eye care

Ever since the National Health Mission (NHM) aiming at architectural correction of health system in India has been launched, the health systems have witnessed great improvement. community level volunteers like Accredited Social Health Activist (ASHA) workers if appropriately trained and sensitized, could be tapped for channeling patients to avail primary eye care services in local vicinities and their work can be supervised by the PMOAs and MOs. With this model, Kalinga Eye Hospital has approached the District Health Officer and convinced them of the need for

intervention. In the first phase 28 ASHA saathi's were trained on identifying people with ophthalmic ailments, counselling-sensitizing them about the importance of eye care and nearby referral centres for treatment as quick treatment amount of vision can be saved/preserved. These ASHA's were provided with a scientifically designed Eye Screening KIT. The training was conducted at the NHM, meeting hall of Dhenkanal on dated 23/11/2016. In the coming months all the ASHA saathi's of the District will be trained and then the ASHA. After Dhenkanal, a similar plan will be grounded for Angul and Deogarh district of our state under the National Rural Eye Health Programme of Sight savers.

# Kalinga Eye Hospital Trust

The Kalinga Eye Hospital Trust was founded in 2014 to support the Kalinga Eye Hospital in its mission to eliminate needless blindness and to promote sustainable, high quality and patient centric eye care across the state. It does so by facilitating knowledge exchange and active partnership with District Administration, Social enterprises, healthcare, Government, other non-profits and individuals. The Kalinga Eye Hospital Trust also supports those programmes of Kalinga Eye Hospital which are not self-sustaining by Kalinga Eye Hospital's core operation.

# Facilities at Kalinga

**Visual Field Analyzer (Perimeter)**

**Non Contact Tonometer**

**Retinal Camera**

**B-Scan (Ultra Sound)**

## Advocacy with the District Admin for “Eye Care for All: Angul”.

After the award winning concept of “Eye Care for All- Khordha” which received the Chief Minister Award in 2016, to make eye care services available, accessible and affordable for all the people of Angul district, Kalinga Eye Hospital has come up with the advanced and upgraded version of “Eye Care for All” for the Angul district. The team from Kalinga Eye Hospital has met the District Administrator and Collector and worked on the concept in presence of the other officials of the district. The District Administration has accepted the collaboration and named the concept as “Netra Jyothi Abhiyan - Angul”. To discuss the detail about the connect, the grounding plans and other things, District Administration has

conducted a preparatory meeting at the conference hall of the District Collector on 10th November 2016, where all stakeholders from the district, along with the officers from the line departments and a steering committee was also formed on the same day to ensure that the activities are conducted properly and in a timely manner to achieve the planned objectives.
